	C Programming Noks by Code With Harry
	What is Programming?
	What is Programming? Computer Programming is a medium for us to Communicate with computers. Just like we use 'Hindi' or English' I to Communicate with each other programming is a way for us to deliver our instructions to the Computer.
	to Communicate with each other programming is a
	way for us to deliver our instructions to the Computer.
	What is C?
	C is one of the oldest and finest programming
	C is one of the oldest and finest programming
	languages. C was developed by Dennis Ritchie at AT&T's Bell Labs, USA in 1972.
	Bell Labs USA in 1972.
	Uses of C
	C Language is used to program a wide variety of Systems Some of the uses of C are as follows:
17	Major parts of Windows, Linux and other operating Systems are written in C.
1,	C is used to write driver programs for devices like Tablets, printers etc.
1	Tablets printers etc.
/	
22	C. language is used to program embedded systems where programs need to run faster in limited memory (Microwave,
	(omeras etc.)
1	
4	Cis used to develop games an area where latency is very important ie Computer has to react quickly on user input.
1	Important ie Computer has to react quickly on user input.

	EDG3
	Chapter 1: Variables, Constants & Keywords
	Variables A variable is a Container which stores a Value.
	A variable is a Container which stores a Value. In Kitchen, we have containers storing Rice, Dal, Sugar etc. Similar to that Variables in C stores Value of a constant. Example:
(ADAM)	SINTER PLA
1. I	a = 3; // a is assigned "3" b = 4.7; // b is assigned "4.7" c = 'A'; // c is assigned 'A'
	Rules for naming variables in C
],	Tirst character must be an alphabet or underscore (_)
27	No Commas, blanks allowed
A	No special symbol other than () allowed. Variable names are case sensitive.
1/	We must create meaningful variable names in our programs. This enhances residulity of our programs.
	Constants An entity whose value doesn't change is called as a constant:
	A variable is an entity whose value can be changed

	ELG3
	Operator precedence In C
	3 * 2 - 8 y is (32) - (8y) or 3(2-8y)?
	In Clanguage Simple mathematical rules like BODMAS, no longer applies.
	The answer to the above question is provided by operator precedence & associativity.
	Operator priority in C
sá	Priority Operators 1 st / %
- d 15	2 nd 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
=	operators of higher priority are evaluated first in the absence of parenthesis.
	Operator Associativity: When operators of equal priority are present in an expression, the tie is taken care of by associativity.
	$\begin{array}{cccccccccccccccccccccccccccccccccccc$
	*, / follows left to right associativity

Chapter 3 - Conditional Instructions
Chapter 5 Conattional Instructions
Sometimes we want to watch comedy videas as
You Tube if the day is sunday.
Sometimes we want to watch comedy videos on youTube if the day is sunday. Sometimes we order junk food if it is our friend's birthday in the hostel.
Vou might what to be an ilmbert of it
You might want to buy an Umbrella if its raining and you have the money. You order the meal if dal or your favorite bhindi
You order the meal it dal or your friends to this!
is listed on the menu.
Repaironal operations in Comments
All these are decisions which depends on a Condition
In C. lamauage for the must be all 1
In Clanguage too, we must be able to execute instructions on a Condition (5) being met.
Decision Making Instructions in C If - else statement
→ If - else statement → Switch Statement
3 Junal Statement
If-else Statement
The syntax of an If-else statement in C looks like:
the condition of the said interior of
if (condition to be checked) {
Statements - if - Condition - true;
210 000 1000 1000 1000 1000 1000 1000 1
Statements - if - Condition - false;
3 Significant of Land and the same of the
укражаем по

	Using if - else if - else reduces indents The last "else" is optional Also there can be any number of else if
	Last else is executed only if all conditions fail. Operator precedence
	Priority Operator
	$\frac{2^{nd}}{3^{nd}} + \frac{1}{\sqrt{2^{nd}}} + \frac{1}{\sqrt{2^{nd}}}} + \frac{1}{\sqrt{2^{nd}}} + \frac{1}{\sqrt{2^{nd}}} + \frac{1}{\sqrt{2^{nd}}} + \frac{1}{$
P. W.	Conditional Operators A Short hand "if -else" can be written using the Conditional or ternary operators
	Condition ? expression-if-true: expression-if-false Ternary operators
	Dankelin V
	1 10Å)

"Case" and "default" Statements are executed.

* Quick Quiz: Wrik a program to find grade of

A student given his marks based on below:

→ 90 - 100 → A → ∠ 70 → F.

→ 80 - 90 → B

→ 10 - 80 → C

→ 60 - .70 . → D.

	EDGI
E 17	Important Notes We can use switch-case statements even by writing cases in any order of our choice (not necessarily ascending)
2>	char values are allowed as they can be easily evaluated to an integer
3,7	A switch can occur within another but in bractice this is rarely done

	Chapter 4 - Loop Control Instruction
	Why Loops
N. D.	Sometimes we want our programs to execute few set of instructions over and over again for ex: printing 1 to 100, first 100 even numbers etc.
	of instructions over and over again for ex:
	printing 1 to 100. first 100 even numbers etc.
	Hence Loops make it easy for a programmer to tell computer that a given set of instructions must be executed repeatedly.
1	tell computer that a given set of instructions
	must be executed subspectedly
	I'm I we vienned reporting.

	Chapter 9 - Structures
_	the service of the state of the service and the
	Arrays and strings => Similar data (int, floot, cher)
_	Le contract of the state of the
	Structures can hold => dissimilar data
	TAN THE COLUMN THE SHIPS OF
	Syntax for creating Structures A C Structure can be created as follows:
	1) (skyre type can be usented as follows:
	all all real Blockman date lider which de
	struct employee &
	int code; => This declares a new
	int code; => This declares a new float salary; user defined data - type!
	float salary
4	char name [10];
- 1	semicolon is important
	3cm/colon 15 important
	We can use this user defined data type as follows:
	We wan use this work are trica war type as follows.
	Struct employee e1; => creating a structure variable
	State imployee C1; — Clarity a state warmen
	Stropy (e1. name, "Harry");
	e1. code = 100;
_	e1. Salary = 71.22;
_	6. A clausting of it A collection of variables
_	So a structure in C is a collection of variables of different types under a single name
_	of raylerent types where a single name
_	A. b. A Islaile A brown la close the I taile
_	Quick Quiz: Write a program to store the details
_	of 3 employees from user defined data. Use the structure declared above.
_	
_	the day of the stand works the

	Why use structures?
	We can create the data types in the employee Structure Separately but when the number of properties in a structure increases, it becomes difficult for us to create data variables without structures. In a nut shell:
List)	Structure separately but when the number of
	properties in a structure increases, it becomes
	difficult for us to create data variables with
	Skyrchykes. In a nut chell:
	Syntax for continuo stanctures
(a)	Structures Rook the data prognized
(h)	Structures keep the data organized. Structures make data mangement easy for the
(4)	programmer.
	the short of the shirt
	Acray of Skuctures
	Just like an array of integers, an array of floats and son array of characters, we can create an array of structures.
	and an array of characters, we can Greate
	an array of structures.
Sanla	Struct employee facebook [100]; => An array of Structures
	Structures
Marie	Street embouriers are strong a shared
	We can access the data using:
	facebook [o]. Code = 100; facebook [1]. Code = 101;
	facebook [1]. Code = 101; 1911 : 10011.
	000 & 50 on
: 11	1 Do a structure in C is a scalartin of war
	Initializing Structures Structures can also be initialized as follows:
	Structures can also be initialized as follows:
1	ATT OF THATS ME APPROVED DE MELLY . LAND MAINE
18.	Struct employee harry = 2 100, 71.22, "Harry"};
	Namita V. vallak Nathill Nat
	Struct employee shubth = \ 203; \Rightarrow All elements set to 0

	Structures in memory Structures are stored in contiguous memory locations For the structure e1 of type struct employee, memory layout looks like this:
	Structures are stored in continuous memory locations
	For the structure e1 of tube struct employee memory
	layout looks like this:
	Void Stone (Since engloyee C): see Junets to
	V V
	100 (71.22 Harry)
_	Address > 78810 78814 78818
	In an array of structures, these employee unstances
	In an array of structures, these employee instances are stored adjacent to each other.
	The south the party of the state of the stat
	Pointer to structure can be created as follows:
	H pointer to structure can be related as follows:
	Claust embores + blu.
	Struct employee * ptr; ptr= & e1;
	PURSIE CITY
	Now we can print structure elements using:
	2 Voldand to 112 lot dod-
	print [" % d" * (ptr). (ode);
	(Look ing) = i wai toold
	Arrow Operator
	Instead of writing * () tr). Code we can use arrow
	Instead of writing * (ptr). Code, we can use arrow operator to access structure properties as follows
_	
_	* (ptx)·lode Ox ptx -> Code
_	4
_	Here -> is known as the arrow operator.
_

Typesmof files of which is is not all
There are two types of files:
17 Text files (txt, c)
27 Binary files (.) bg dat)
michael the solid
Reading a file
A file can be opened for reading as follows:
The sound of the s
FILE * btr;
btr = foben ("Harry txt" "r")
int num;

U	R	В	A	N	
	Г	1	•	3	
	L	L	7	_	

Let us assume that Harry txt contains van integer We can read that integer using: fscanf (ptr, "% d", & num); => fscanf is file counterpart of

This will read an integer from file in

num variable. Quick aug: Modify the program above to check whether the file exists or not before opening the file. CLOSING the file

It is very important to close the file after read or write. This is pacheived using fclose as follows: This will tell the compiler that we are done working with this file and the associated resources could be freed. Writing to a file.
We can write to a file in a very similar manner.
Like we read the file. FILE *ptr;
fptr = fopen ("Havry txt", "w");

	Eddi
July 1	int num = 4325 fprintf (fptr, "ol.d", num): fclose (fptr):
+	fgetc () and fputc are used to relad and write a character from/to a file
1	fgetc (ptr) > used to read a character fputc ('c', ptr); > used to write character 'c' to the file
AT .	fgetc returns EOF when all the characters from a file have been read so we can write a check like below to detect end of file
interior	While (1) { Ch = fgetc(ptr); > When all the content if (ch = EOF) { break; break the loop!

und risk	Chapter 11 - Dynamic Memory Allocation	سر سم
	C is a language with some fixed rules of programming. For example: Changing the size of an array is not allowed.	^ ^
and the second s	Dynamic Memory Allocation Dynamic memory allocation is a way to allocate memory to a data structure during the runtime	
	We can use DMA functions available in C to allocate and free memory during runtime.	تــــــــــــــــــــــــــــــــــــ
	Functions for DMA in C Following functions are available in C to perform Dynamic memory Allocation:	
17	malloc()	
1,	Calloc () free () in a region of the state of the 1	
4,	realloc () describée is returned () sollais	
M	malloc () function mallocation. It takes number of	<u>-</u>
	bytes to be callocated as an input and returns a pointer of type void	
1	Syntax: it of motoring (1804 all 1800)	
-	1. 1. 1. (00. 6:00 []: 1]	

ptr = (int*) malloc (30 x Size of (int))

spect for returns Size of 1 int

casting void 30 ints

The expression returns a null pointer if the namery cannot be allocated. Quick Quiz: Write a program to create a dynamic array of 5 floats using mallocl). Calloc Stands for continuous allocation.

It initializes each memory block with a default value of o ptr = (float 1) Calloc (30, Size of (float)); If the space is not sufficient, memory allocation fails and a NULL pointer is returned. Quick any: Write a program to create an array of Size n using calloc where n is an integer entered by the user. function San use free() function The memory allocated using salloc/malloc is deallocated automatically.

	ELG1
	Syntax: 190 subort - 11 solder
	free (ptr); => Memory of ptr is
M	stores plannerale of margreleased stored
	13 Klimber 10 of the 11 of 1800 to 18
	Quick aug: Write a program to domanstrate the
	Quick aux: Write a program to demonstrate the usage of free() with malloc().

	ELG3
	Chapter 11 - Practice Set
1	Write a program to dynamically create an array of size 6 capable of storing 6 integers.
2	Use the array in problem 1 to store 6 integer entered by the user
3 =	Solve problem 1 using callock
4 2	Create an array dynamically capable of Gloring 5 integers. Now use realloc so that it can now Store 10 integers.
5 %	Create an array of multiplication table of 7 Upto 10 (7×10 = 70). Use realloc to make it Giore 15 numbers (from 7×1 to 7×15).
6	Attempt problem 4 using calloc().
	A CONTRACTOR OF THE PROPERTY O
